Use-Case Specification: Adding New Computer

1. Adding New Computer

1.1 Brief Description

This use case defines the steps of adding a new computer to store it in the database system. Administrator can easily add a new computer in the database.

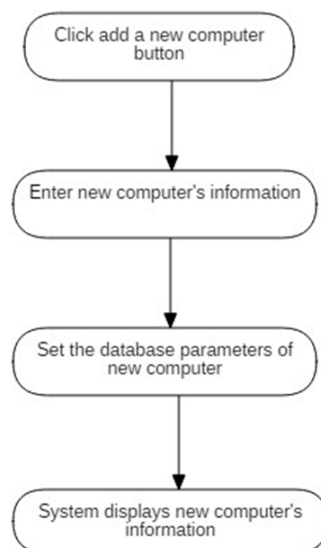

1.2 Actor

Administrator.

2. Flow of Events

2.1 Basic Flow

The system administrator selects to add a new computer and enters all information of this computer to store in the database system. The administrator sets the database management parameter that holds computer information that has just added. The system displays the new computer data value and logs the change.

Basic flow of adding new computer
